Strong, Quality and Sustainable

Our **NATO Facility Security Certificate** offers the privilege of developing special design technologies and projects for NATO and Turkish Defence Industry.

Our Integrated Management System (IMS) is an approach that combines all our activities, processes and management systems under a single roof. This system brings together different management disciplines such as quality, environment, occupational health and safety and enables businesses to operate more effectively and efficiently.

Always Forward with Strong Partnerships!

Our success is underpinned by strong co-operation and solid industry connections. Strategic collaborations with key partners enable us to develop innovative solutions and maintain our market leadership. In addition to these collaborations, our memberships in leading industry clusters help us to build effective networks and keep abreast of the latest trends.

Together we shape the future!

By actively participating in the calls of leading organisations, we play an important role in the development of innovative projects. These collaborations strengthen our position as a globally recognised actor, while providing us with the opportunity to follow the latest developments in the sector and to continuously learn and grow. Our innovation and sustainability-based projects shape our vision for the future and provide value to society.

What Does MİA Teknoloji do?

MİA Teknoloji (BIST50: #MIATK) is a technology company that carries out national and international projects with its investor identity. With its technological experience and public & private sector references from the past, it develops R&D studies and projects in 10 different sectors with its innovative approach.

R&D
Culture

We continuously improve our products and services with our innovation-oriented efforts. This approach helps us identify technological trends and position ourselves among the pioneers of the market.

New Market
Objectives

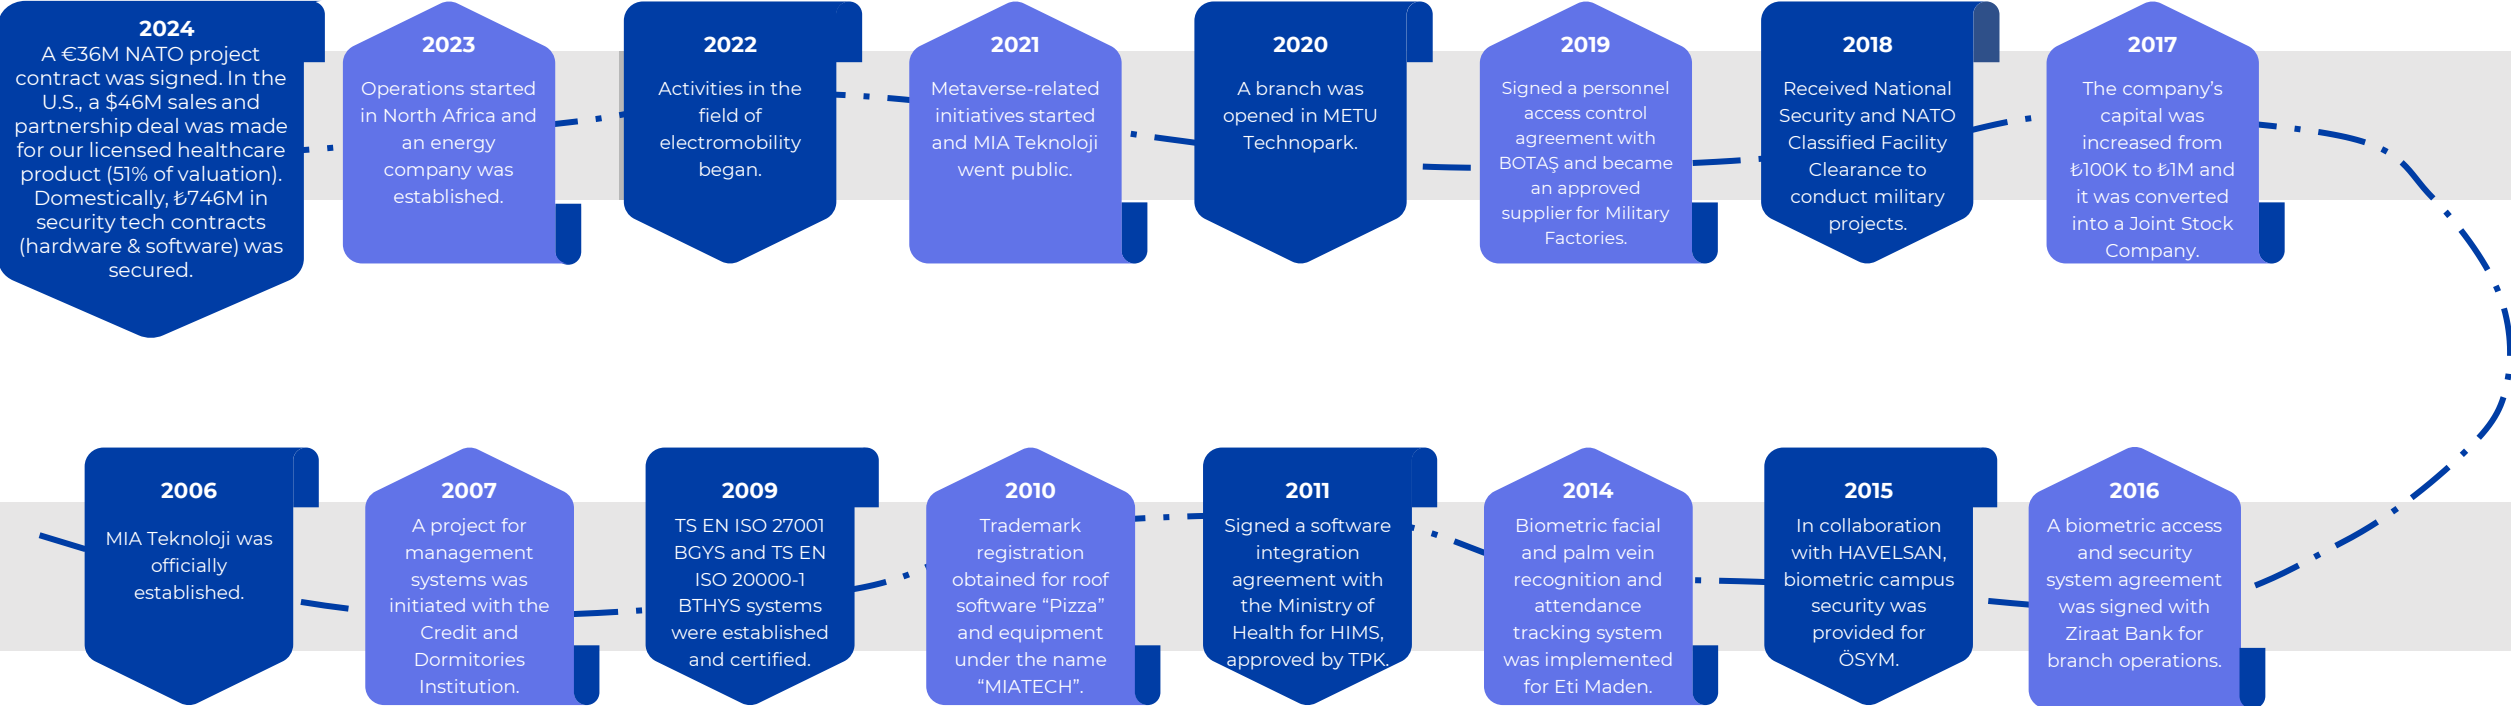

We aim to expand into new markets with our global competition and diversification strategies. Our strategic plans for technology markets in Asia and Europe enhance our global vision and brand value.

National and
International Projects

We realise successful projects in Turkey and around the world. We exhibit our reliability and technological competences by taking part in international platforms.

Milestones

Industry Experience

With 17+ years of experience and a strong team structure built on successful projects, we've established a robust foundation enriched by expertise across various industries.

R&D Accumulation

Our identity as an R&D-focused company brings along a strong foundation of knowledge and innovation.

Tailored Model

We deliver fast and custom system solutions in response to client-specific demands.

System Integration

With strong infrastructure and product experience, we operate as one of the leading system integrators, capable of working independently from brand dependencies.

Our Strengths

Strong Partnerships

We have established long-term solution partnerships with reputable global and local companies such as **NEC, DELL, Axis, Dahua, Megvii, Aselsan, and Havelan**, who are recognized in their fields.

Key References

We have successfully completed numerous high-profile projects, enabling us to meet both local and international expectations and standards.

Innovative Technologies

We adapt to industry changes with continuous innovation and offer effective, efficient solutions that keep up with sector dynamics.

Technopark Incentives

Through our membership in the Technopark Development Zone, we benefit from R&D and innovation incentives including:

- Corporate tax exemption (100%)
- VAT exemption (100%)
- Social security premium support
- Customs and stamp duty exemptions on eligible products (100%)
- Direct access to the State Supply Office (DMO) catalog for products developed within the Technopark

MİA Teknoloji A.Ş. IPO Summary	
IPO Date	November 22, 2021

Highlight Project

MIA Teknoloji's Leadership in NATO Project and Turkey's International Success

NATO NCIA Ship-Shore-Ship Buffer (SSSB) Project

MEE Business Partnership was established by **MIA Teknoloji**, and 2 other **Turkish companies**. After winning NATO/NCIA's IFB-CO-15577-SSSB tender, the contract was signed on 25 July 2024 in the Netherlands.

The project will add **Link 22** technology to NATO's **air** and **sea defence** systems. **HF** and **UHF** stations will be installed and maintained in the UK, the Netherlands and Greece, and the project will last for **5 years**.

Our consortium of Turkish teams will continue to represent **Turkey** in international projects.

Highlight Project

90 Million Dollars
Licence Sale from
MIA Teknoloji to
US Based Investor
for Healthcare
Software

Sale of Licence Rights of Health Informatics Software to US Based Investor

We transferred our licensing rights in **health informatics software** to our New York-based subsidiary **MIA Tech Corporation** and sold 51 percent of our subsidiary company to a US-based investor.

This agreement covers a total **licence sale** of **USD 90 million**. With this strategic step, we aim to make **Turkey** a leading **centre in the global health technologies** market.

As MIA Technology, with this important investment in **health technologies**, we are increasing our **influence** in the **global arena** and strengthening Turkey's leadership.

Solutions

MIA
TEKNOLOJİ

Defence Industry and Defence Technologies

We develop integrated systems based on advanced technology to counter national security threats by providing innovative defence solutions. Together with our strategic partners, we produce sustainable defence projects at national and international level.

- Mine Detection System
- Paramotor Detection and Tracking System
- Drone Detection Radar
- Intelligent Fibre Optic Sensor (IFOS)

Critical Facility Security and Management

We offer a variety of advanced technologies to ensure the security of critical areas, facilities or buildings. By managing these technologies in an integrated manner over a single platform, we facilitate control and ensure maximum security. This integration ensures that critical areas are always protected with continuous monitoring and proactive security measures.

- Biometric Access Control Systems
- Perimeter Surveillance System
- Anti Drone Systems
- Perimeter Security Radar
- Restricted and Special Authorised Zone Management

Integrated Facility Security and Management

Our integrated systems, which provide security and management of one or more facilities through a single structure, facilitate integration and operations with existing hardware without the need for new hardware investments. This approach maximises security by increasing cost effectiveness and operational efficiency.

- Biometric, card and mobile access control systems
- Camera, sensor safe area management systems
- Personnel attendance control system
- Visitor registration and authorisation system
- Vehicle recognition, access and car park management system
- Cafeteria and payment management system
- Lighting, air conditioning, and fire systems
- Kiosk, printer and lift management systems

ID Recognition, Authentication and Authorisation

Equipped with advanced facial recognition technology for facilities and buildings, our integrated identification and verification systems increase security measures with 1-1, 1-N, and N-N rapid face matching and face quality analysis capabilities. These systems ensure the security of your facilities in a seamless and reliable way by speeding up authentication.

- Face Recognition
- Iris Recognition
- Fingerprint
- Finger Vein Print
- Smart Card
- Mobile Recognition

Border Security Management and Surveillance Systems

Equipped with climate-resistant cameras and sensors deployed in critical areas such as borders and base areas, our systems provide early threat detection through our dedicated fusion centre. These integrated solutions proactively increase security within defined rules.

- Territory and border surveillance
- Person face recognition and tracking
- Camera, radar and sensor management
- Monitoring, early warning and information
- Person movement analysis with geographical information system integration

City Monitoring, Surveillance and Analysis

Equipped with advanced security systems for urban public safety, our city surveillance solutions aim to create safer living spaces for citizens. These systems significantly enhance urban security with continuous monitoring and rapid response capacity.

- Face recognition and tracking in crowded areas
- Age and gender analysis
- Crowd and anomaly detection
- Data centre installation
- Establishment of command, control and monitoring centre

Health Information Technologies

Our services and supply chain solutions optimise the medical, administrative, financial and legal processes of hospitals, facilitating integration within the healthcare system and strengthening the country's healthcare infrastructure. These systems increase efficiency and allow hospitals to operate more effectively.

- Increases the operational efficiency of healthcare professionals and facilitates patients' access to the healthcare system.
- Provides revenue increase with effective services for large bed capacities.
- Manages all administrative and software needs of hospitals in an integrated manner.
- It offers scalable solutions integrated with national health systems.

Intelligent Traffic Control

By monitoring traffic flow on city centres and motorways, our systems ensure vehicle recognition and compliance with local inspection rules, improving traffic safety and reducing transit times. These solutions provide a smoother and safer driving experience with effective traffic management.

- Electronic monitoring system
- Number plate, make, model and colour recognition
- Smart intersection and signalling systems
- Vehicle instantaneous and average speed detection
- Command, control and data centre installation

Shared Electric Vehicle Rental

In order to promote sustainable transport in cities, we offer users modern and environmentally friendly shared electric car hire services. This service is shaping the future of transport as an easily accessible and economical option.

- Electric bicycle operation
- Field and operation management
- End user and management software
- Integration and installation services

Tripy Mobility

Tripy is a company founded in 2022 that offers shared electric vehicle rental services and holds a license to operate an electric vehicle charging network.

It aims to build an environmentally friendly future by providing sustainable transportation solutions.

Investor Capital Support

Charging Stations Across Türkiye

15 DC

45 AC

Electric Vehicle Charging Network Operation

In order to reduce carbon emissions and support sustainable transportation, we are establishing a network of Electric Vehicle Charging Stations within our institutions. In this way, we aim for a cleaner world by providing uninterrupted and environmentally friendly charging opportunities for electric vehicles.

- Installation of AC and DC (high speed) electric vehicle charging stations
- Installation and infrastructure services
- End user and management software
- 24/7 maintenance and repair

Sustainability and Zero Carbon

We provide services in sustainability reporting, greenhouse gas emission inventory reporting and mandatory and voluntary carbon markets. We aim to increase social, environmental and economic sustainability by developing innovative technological projects.

- GRI Approved Sustainability Report
- Carbon and Water Footprint Calculation
- Carbon Limit Adjustment Mechanism
- Carbon Capture
- Carbon Trading Transactions and Provision of Carbon Certificates

Sustainable Agriculture and Food Security

We offer innovative solutions in the field of sustainable agriculture and food safety. We provide technology and consultancy to the agricultural sector through international collaborations and credit registry memberships, and contribute to sustainable food production by reducing environmental impacts.

- Data Management and Artificial Intelligence Decision Support Systems
- Fleet Management and Green Energy Systems
- Sustainable Products and Global Competition

Mining Technologies and Services

We support sustainable and efficient mining operations by providing innovative technologies and integrated solutions to the mining sector. Through projects aligned with national and international standards, we optimize exploration, operation, and rehabilitation processes.

- Mineral Exploration and Resource Modeling
- Mining Legal Consultancy and Licensing
- Procurement of Mining Equipment and Operational Support
- Sustainable Mining and Environmental Rehabilitation

Renewable Energy Technologies

Focusing on renewable energy sources, we offer sustainable solutions in the fields of solar, wind, and biomass. We provide technology and consultancy services to reduce environmental impacts and increase energy efficiency.

- Project Development and Engineering
- Procurement and Construction
- Solar Power Plant
- Asset Management
- Energy Storage
- Energy Management Systems
- Finance Solutions and Investment

Cyber Security

In order to protect organisations against cyber-attacks and malware, we ensure the cyber security of organisations with systems using machine learning and artificial intelligence, conduct vulnerability analyses and provide cyber security training to personnel.

- Endpoint Security
- Endpoint Monitoring and Management
- Firewall (Classic, Next Generation and WAF)
- Data Loss Prevention (DLP)
- Log Management and SIEM
- Penetration Test
- Cyber Security Consultancy
- Cyber Security Trainings

A person wearing a VR headset is shown in profile, interacting with a futuristic digital interface. The interface features various elements like circular progress bars, a bar chart, a line graph, and text labels such as 'FUTURISTIC HUD', 'TEST', '70%', '90%', 'NORMAL', and 'DANGER'. The background is a deep blue with a purple gradient.

Next-Generation Technologies

MIA
TEKNOLOJİ

WorkARia – Remote Maintenance, Repair, and Control Application

Mixed Reality (MR) technology merges the virtual and real worlds. In remote maintenance, technicians can repair machines without being physically present on-site. This reduces costs, saves time, and increases efficiency.

- Remote Connection
- High-Security Communication
- Online Technical Support
- Holographic Guidance
- Reduced Travel Costs
- Ensured Operational Continuity

Video

Command Control and Strategic Planning Application

Through holographic maps and mixed reality technology, this application enables remote command and control by providing real-time data from strategic planning, coordination, and operational elements on any desired map.

- Multi-User Connectivity
- High-Security Communication
- Strategic Planning
- Field Coordination
- Real-Time Monitoring and Visual Contact

Video

Virtual Reality Training Classrooms

Virtual training classrooms offer an interactive and engaging learning experience through virtual and augmented reality. Students can better understand complex subjects using 3D models and simulations, and come together regardless of geographical barriers. These classrooms provide flexible and collaborative learning environments.

- Instructor-specific authorizations
- Practice and exam system
- AI-based scoring algorithms
- Interactive environment
- Location-independent access
- Customization of educational content and environment

Military Virtual Reality Simulation Trainings

This project integrates virtual reality technology into military training to reduce the need for instructors. It allows personnel to receive hands-on and practical training without going into the field or using live ammunition, resulting in a more efficient training program.

- Sustainable Practical Training
- Ease of Implementation
- Location Flexibility
- Efficient Use of Personnel
- Training Evaluation

Explora – Offline Maintenance and Repair Guidance Platform

The platform enables experts to create maintenance and repair procedures for devices and equipment using QR markers. It allows personnel to complete the procedures flawlessly by following 3D guides and documents, even without internet access.

- Offline Flexibility
- Developer and User Mode Separation
- 3D Guidance and Visual Instructions
- Fast Content Update and Management
- Process Optimization

Virtual Reality Language Learning Application

Virtual reality language learning applications make language acquisition interactive through virtual and mobile platforms. Students can practice in virtual environments, improve their language skills, and engage in cultural exchange with learners from around the world.

- Mobile & virtual reality platform
- Foreign language education in 12 languages
- Hands-on training with real-world scenarios
- 24/7 active virtual classrooms
- Location-independent access

Video

Maintenance and Repair with MR (Mixed Reality)

Mixed Reality (MR) combines physical and digital worlds to offer more efficient, faster, and effective solutions in maintenance and repair processes. Thanks to this technology, technicians can view real objects overlaid with augmented digital information in real-time, enabling more accurate and precise interventions.

- Real-time guidance
- Fast and error-free repair
- Increased process efficiency
- Easy fault detection

Maintenance and Repair with MR (Mixed Reality)

Technicians can repair machines without being physically on-site and are guided by real-time data. This reduces costs, saves time, and minimizes errors.

- Staff training with device manuals
- R&D activities
- Holographic guidance
- Working on digital twin
- Artificial intelligence algorithms

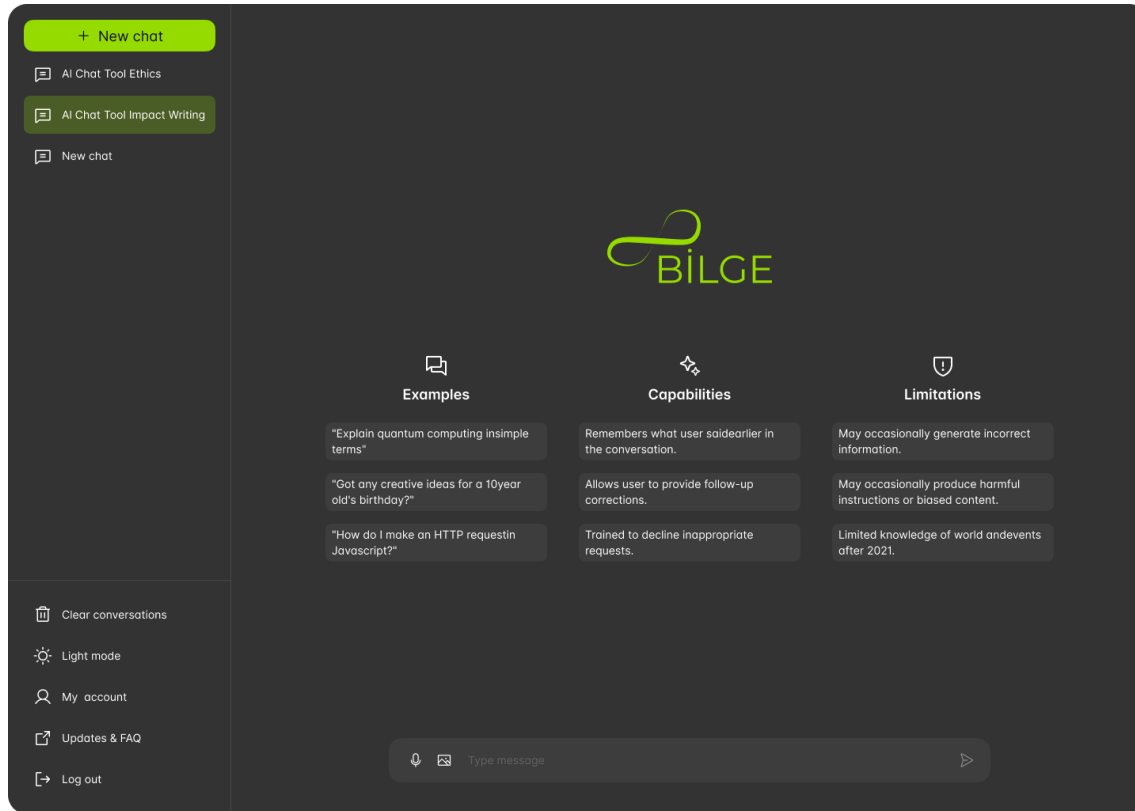

MIA-KAHIN – The Most Accurate Predictions with Deep Learning

Using time series data along with statistical and deep learning methods, the most accurate predictions are made. MIA-KAHIN, which includes multiple artificial intelligence models, automatically selects the model that will provide the most accurate result for the given context and guides the user accordingly.

- Multi-Dimensional Approach
- Model Optimization
- Enhanced Predictive Power
- Modeling of Long-Term Dependencies
- Increased Prediction Accuracy

Bilge – Strengthen Your Processes with Smart and Secure Insights!

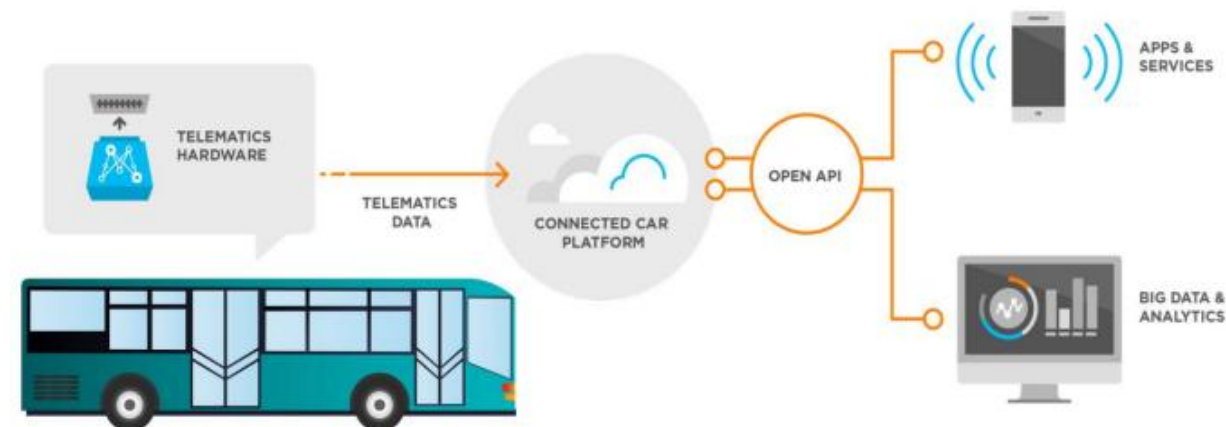

As a fully local Large Language Model (LLM) operating entirely on an internal network without internet access and adhering to high security standards, Bilge accelerates business processes with AI support without exposing corporate data externally. This innovative technology, which leads Turkey's digital transformation, is ushering in a new era of information management in both the public and private sectors.

- Fully Local and Secure LLM Technology
- A Revolution in Operational Efficiency
- Strategic Focus
- Leadership in Digital Transformation
- Cloud-Independent Solution

Safe Public Transportation

This project aims to enhance passenger safety and security by implementing the “AI-Based Safe and Secure Public Transport Framework.” The goal is to improve the safety of public transport users.

Among its objectives are monitoring driver behavior and driving attitude, ensuring onboard safety in public transport vehicles, tracking the health condition of buses or shuttle vehicles, and using deep learning and image processing to perform facial recognition, detect anomalies, and monitor weather events and natural disasters. The system is also equipped with specific capabilities to issue alerts for adverse weather and natural disaster situations.

Inflammation Detection with Gummy AI

An innovative solution designed to monitor dental and gum health by combining thermal imaging technology with artificial intelligence.

Specifically targets the detection of gum inflammation (gingivitis) at varying levels, offering an early warning system that helps make treatment planning more efficient.

- Prevention of gum problems before progression through early diagnosis
- Automated reporting to accelerate doctors' diagnostic processes
- Targeted approach in treatment planning

PizzyKurum

PizzyKurum is a system suite that enables the security and management of one or multiple facilities to be monitored and controlled through a single structure.

It allows institutions to integrate and operate the system using existing hardware, eliminating the need for new hardware investments. The application allows usage permissions to be granted based on modules, user roles, or menu levels.

International Business Development Processes (Target Regions)

North America

In January 2022, MIA Teknoloji opened its North America branch and began operating in the fields of Immersive Technologies and Blockchain.

Health informatics software rights were transferred to our New York-based subsidiary MIA Tech Corporation, and 51% of the company's shares were sold to a U.S. investor.

As part of this agreement, a partnership was established for \$46 million USD, representing 51% of a \$90 million USD health license valuation.

Middle East

MIA Teknoloji aims to establish a strong presence in the Middle East by offering innovative solutions in public health and hospital management systems.

With the health informatics market expected to reach a volume of \$4 billion in the near future, efforts are underway to position the company as a market leader.

North Africa

Since 2000, MIA Teknoloji has been a part of the digital transformation of Turkey's healthcare sector, and it continues to support this transformation through international integrations.

In May 2023, the Rabat branch in Morocco was opened, launching projects in digital transformation, healthcare, and security. Local teams and support from the headquarters will drive key projects in the region.

Turkic Countries

We aim to implement the latest technological solutions focused on healthcare, safety, and smart city technologies in Turkic countries.

Particularly with Hospital Information Management System (HIMS) solutions, the goal is to ensure data security in the healthcare sector.

In addition, we are developing strategic solutions in the field of AI-powered surveillance and security systems for smart city projects.

Financials

MIA
TEKNOLOJİ

LiNK Bilgisayar Sistemleri – Investment

- ❑ Founded in 1984 by a group of young entrepreneurial engineers with 100% Turkish capital, Link Bilgisayar Sistemleri Yazılımı ve Donanımı Sanayi ve Ticaret A.Ş. develops software that enables the integrated execution of Enterprise Resource Planning (ERP) functions such as sales, marketing, purchasing, inventory management, warehouse-store management, current accounts, finance, production, budget planning, human resources, fixed assets, and accounting.
- ❑ The software packages developed by Link Bilgisayar using the latest global technologies are used by companies of all sizes and from all sectors. Additionally, member companies in the Link Bilgisayar distribution network include solution partners that either develop custom integrated software solutions to meet various software needs of businesses using Link packages or integrate their own vertical sector solutions into Link's software packages.
- ❑ MIA Teknoloji holds a 14.13% share in Link Bilgisayar. Going forward, Link aims to expand its R&D projects with MIA's expertise and broaden its sales network to further increase its impact on revenue.
- ❑ With its significant entry into the IoT market through Vitalis Teknoloji, MIA Teknoloji will also gain opportunities to develop projects in ERP integration processes through the merger of Vitalis Teknoloji within the Link Bilgisayar structure.

Capitalized Expenses (R&D Investments)	2,069,797,777	2,080,741,017

(*) Figures for 2024 and 2025 reflects amounts adjusted for inflation

- ▶ Our net working capital stands at **₺1.321 billion**, and there is no financial risk in meeting our short-term liabilities with current assets.
- ▶ As of the end of 2024 our net cash position was **+₺170,2 million**, whereas by the end of 2025/3, it decreased to **-₺124,1million**.
- ▶ As of 2025/3, the share of equity in total assets has reached **77.2%**, continuing to differentiate positively.
- ▶ As of 2025/3, the share of total liabilities in total assets remained low at **22.8%**.
- ▶ At the end of 2025/3, our gross profit was realized as **TL 233.4 million**, and 2025/3 closed with **46.2%** gross profit margin.
- ▶ At the end of 2025/3, our EBITDA was realized as **TL 341.0 million**, and 2025/3 closed with **67.5%** EBITDA margin
- ▶ At the end of 2025/3, our net profit was realized as **TL 31.3 million**, and 2025/3 closed with **6.2%** net profit margin

- ▶ In 2025, TL-based revenue growth is expected to be in **the mid-double-digit range**, with a goal to achieve growth above the anticipated inflation rate. Our aggressive growth strategy will continue with the support of various business lines.
- ▶ We expect to maintain our R&D investments and achieve sectoral diversification in revenue during 2025.
- ▶ We aim to close the year with an EBITDA margin in the range of **60% to 70%**.
- ▶ Our operating profit margin is expected to be in the range of **60% to 65%**.
- ▶ Part of the net profit increase in 2024 was due to the revaluation of our LINK shares at market value, which led to a higher net profit margin.
- ▶ Excluding one-time income items in 2025, we are targeting a net profit margin in the range of **40% to 50%**.

43 Projects

MIA Teknoloji is located in **Gazi University Technopark**, and **project activities** are carried out under this umbrella.

AI-based disease detection projects

Augmented reality-based remote maintenance applications

Mixed reality-based robotic control systems

Metaverse-based meeting rooms and virtual marketplace applications

Virtual reality-based educational applications

Innovative mobile applications within mobility scope

Innovative and comprehensive electronic mobile payment systems

Machine learning-based sectoral data prediction systems

AI-based safe public transportation management systems

Deep learning-based border detection systems

	2022	2023	2024
R&D Revenue (Annual)	623,623,329	1,173,202,343	1,413,852,736
Capitalization Expenses			
Cummulative R&D Investments	793,135,989	1,749,926,109	1,880,861,284
Total Assets	1,470,336,285	3,140,143,136	6,360,955,780

As of 2024, 43 R&D projects have been commercialized.

Projects Applied

TÜBİTAK 1501	Requested Budget: 188,647.36 USD	Grant Rate: 75%
TÜBİTAK 1707	Requested Budget: 213,067,00USD	Grant Rate: 75%
AB-HORIZON	Requested Budget: 1,925,000.00 USD	Grant Rate: 100%
AB-CHIST-ERA	Requested Budget: 159,500.00 USD	Grant Rate: 75%
TÜBİTAK 1505	Requested Budget: 28,046.49 USD	MİA Funder: 40%
ERASMUS+	Requested Budget: 330,000.00 USD	Grant Rate: 70%
